REC\_DS using C\_Week 2\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

### **Output Format**

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

## Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
  struct Node* newnode = (struct Node*)malloc(sizeof(Node));
  newnode->item=item:
  newnode->prev=NULL;
  newnode->next=NULL;
  if(*head==NULL)
   *head=newnode;
```

```
return;
                                                   240701383
       struct Node* temp=*head;
       while(temp->next!=NULL)
         temp=temp->next;
       temp->next=newnode;
       newnode->prev=temp;
    void displayForward(struct Node* head) {
       //type your code here
      struct Node* temp = head;
      while(temp!=NULL)
         printf("%c ",temp->item);
         temp=temp->next;
       }
       printf("\n");
    void displayBackward(struct Node* tail) {
       //type your code here
       struct Node* temp = tail;
       while(temp!=NULL)
         printf("%c ",temp->item);
         temp=temp->prev;
       }
       printf("\n");
    void freePlaylist(struct Node* head) {
       //type your code here
       struct Node* temp;
       while(head!=NULL)
                                                   240701383
        temp=head;
        head=head->next;
         free(temp);
```

```
struct Node* playlist = NULL; char item;

vhile (1) {
                                                         240701383
int main() {
         scanf(" %c", &item);
         if (item == '-') {
            break;
         insertAtEnd(&playlist, item);
     struct Node* tail = playlist;
       while (tail->next != NULL) {
         tail = tail->next;
       }
       printf("Forward Playlist: ");
       displayForward(playlist);
       printf("Backward Playlist: ");
       displayBackward(tail);
       freePlaylist(playlist);
     return 0;
                                                                               Marks: 10/10
    Status: Correct
